Landscape

Small meadow biotope to grow flowers and attract diverse species and provide food.

Small forest biotope to provide shelter, diverse species and all the beneficial contribution of the tree.

Increasing insects is needed to create a healthy soil. The base to have a climate adaptive ecosystem.

The unaffected landscape gives small animals the chance to live peacefully in the urban fabric next to human inhabitants.

More space for water to also enable the excess water flow of the surrounding urban areas when there is too much rainfall or floodings.

Small water biotope that is in connection with the surrounding waters of Amsterdam is full of resources and biodiversity.

Many indigenous birds are attracted to the wet lands of the Netherlands as this area used to be a polder landscape its sure to provide a safe place once again.

The Route

Water reservoir in elevator tower to store excess water in wet seasons.

The bike path is a slow traffic route which also provides occasional moving trucks or emergency services.

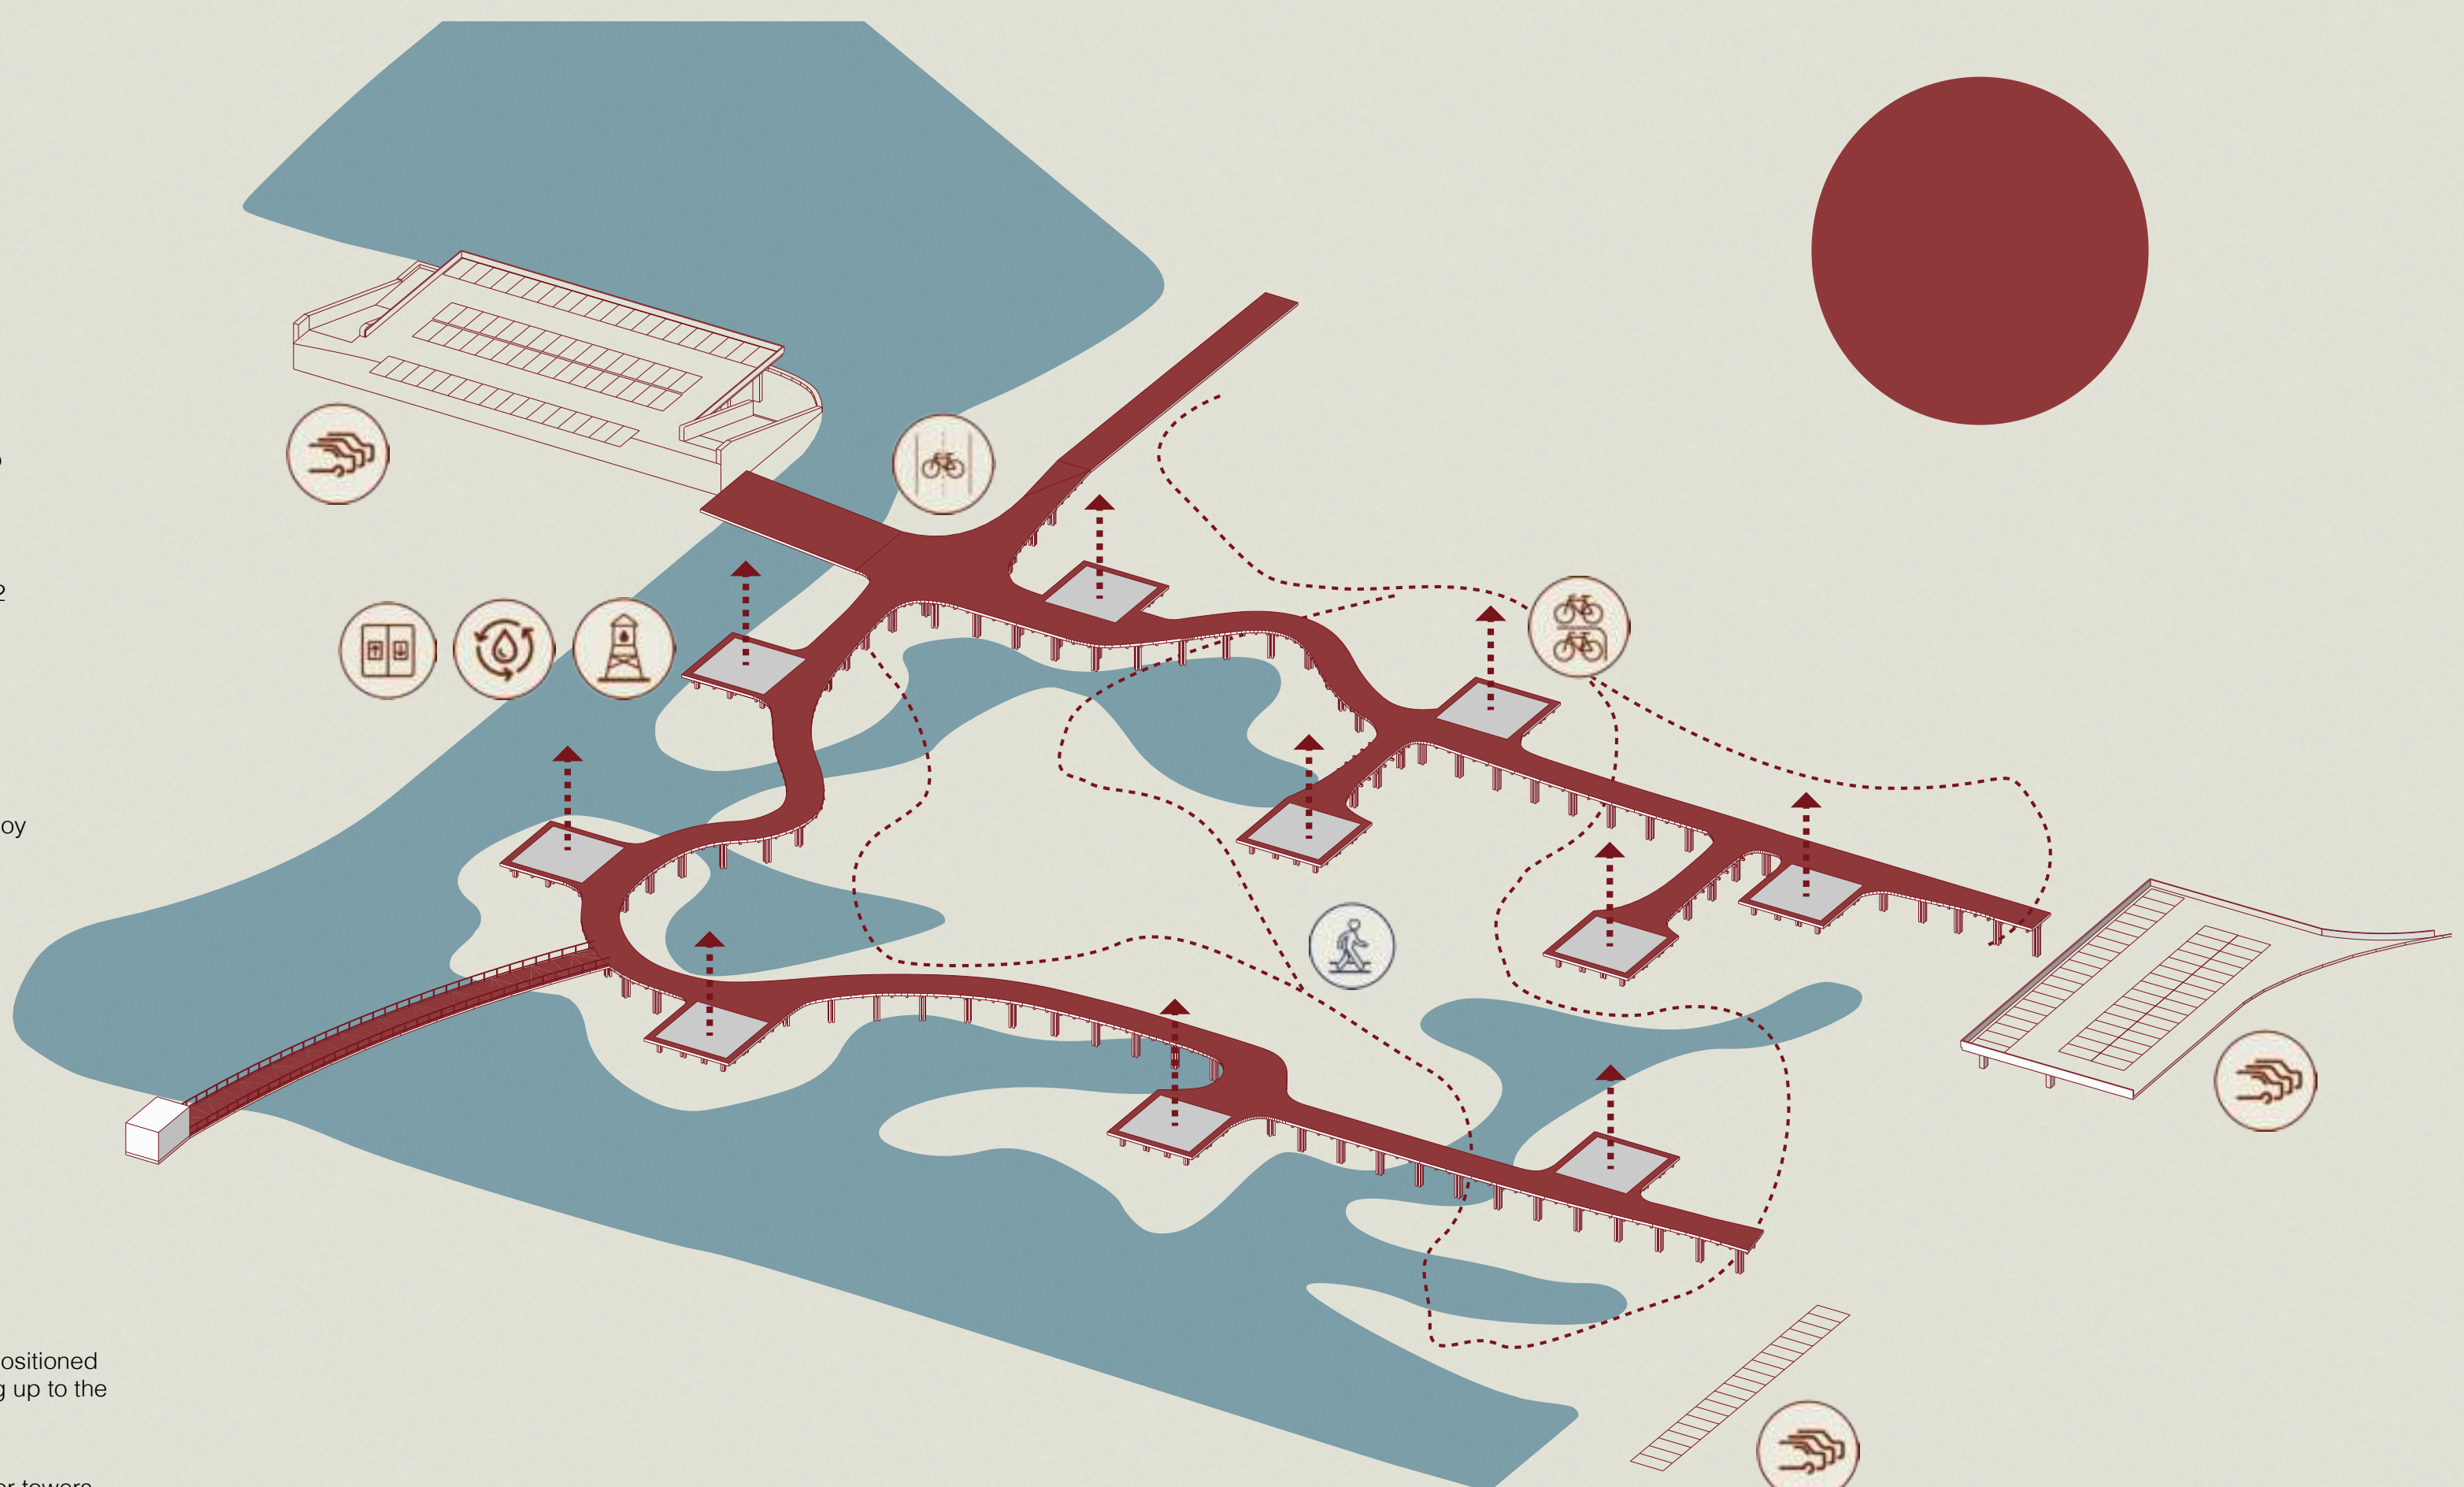

Bike parking takes place on the raised street level. One can take the elevator or ramp to reach this level.

Car parking - North side 102 parking spaces. South side 72 parking spaces.

Small little walking paths to enjoy the city landscape.

10 elevators are strategically positioned to optimize entry points moving up to the raised street level.

The water stored in the elevator towers can be pumped up if needed in dry seasons.

A direct connection to the Metro station Van der Made means easy access to the public transport urban infrastructure.
